EXPERIENCE

Credit Saison India

Lead Software Engineer | Oct 2021 – Present | Bangalore, India

A leading NBFC and subsidiary of Credit Saison Co. Ltd., one of Japan’s largest credit/prepaid card issuers.

- Lead and mentor a team of **4 engineers**, establishing technical standards, conducting design reviews, and owning delivery strategy across platform and lending services; mentored **2 engineers** to SE II promotion; established code review standards reducing merge time **25%**.
- Zero-Trust Authentication:** Architected and led org-wide centralized AuthN/AuthZ using AWS Cognito + Envoy + OPA across **85+ microservices**; delivered **11x** latency improvement (**55ms → 5ms**), **4x** throughput increase, **70%** memory reduction, standardized security policies org-wide.
- LLM-Powered Loan Insights:** Integrated AWS Bedrock to automatically summarize loan rejection reasons into customer-friendly explanations using prompt templating and structured JSON output. Reduced manual customer support effort by **30%**, improved clarity and implemented token-cost controls to optimize API spend.
- Loan Orchestration Engine:** Built high-performance workflow engine (Kotlin/coroutines) processing **20K+ loans/day**; migrated from activity-based to state machine architecture with distributed caching, reducing p99 approval latency **47%** (**15s→8s**) and increasing throughput **2.3x** while cutting DB load **85%**.
- Self-Healing Systems:** Designed an automated self-healing mechanism that detects and reprocesses failed loans via error-code monitoring, auto-resolving **~90%** of failures and cutting cases needing manual intervention from **10%** to **1%** of applications.
- XML Parsing Migration:** Optimized XML data ingestion pipeline processing **30k+ reports/day** by implementing streaming-based parsing, reducing peak memory usage by **43%** and improving throughput by **27%**, eliminating OOM errors and enabling **2x** concurrent processing capacity.
- Automated Verification Pipelines:** Streamlined KYC (UIDAI, NSDL), underwriting (bureau and income checks), and PennyDrop bank verification, accelerating the approval lifecycle by **15%**.

Progression: Senior SE (Oct 2023–Mar 2025) • SE II (Oct 2022–Sep 2023) • SE I (Oct 2021–Sep 2022)

Lenskart

Software Engineer | Mar 2020 – Oct 2021 | Bangalore, India

A leading online eyewear and accessories retailer.

- Real-Time WhatsApp Reporting:** Engineered an event-driven system using Apache Kafka and Gupshup APIs delivering automated daily sales PDFs and real-time analytics to **200+** franchise partners, with **99.5%** message delivery rate and **<2min** daily report generation.
- Financial Reconciliation (Cash Reco):** Built a centralized cash-reconciliation system tracking **2000+** daily transactions across **200+** partner locations, integrating ICICI bank deposits with on-site agent collections, reducing discrepancies by **95%**.

SUMMARY

Senior Backend Engineer with **6.5+ years** of experience designing and building scalable, resilient systems in FinTech and SaaS. Expert in performance optimization, microservices architecture, and SOLID design principles. Skilled in **Java/Kotlin** and **AWS** cloud architecture. Proven track record of technical leadership, mentoring teams, and establishing engineering standards. Delivered significant business impact through: architected centralized **Zero-Trust Authentication** system achieving **11x** latency improvement across **85+ microservices**, engineered loan orchestration platform delivering **2.3x** throughput gains and **47%** latency reduction, and implemented automated incident remediation with **90%** automation coverage. Technical leader responsible for driving architecture decisions and establishing engineering strategy.

EDUCATION

B.Tech, Information Technology
[Cochin University of Science and Technology \(CUSAT\)](#) | 2015 – 2019

SKILLS

Core: Microservices, Performance Optimization, System Design, Technical Leadership, Mentoring, Architecture

Languages: Java, Kotlin, Python, SQL

Backend: Spring Boot, Spring MVC, Hibernate, Coroutines, REST APIs, Event-Driven Architecture

Data: PostgreSQL, MySQL, Redis, ElasticCache, Distributed Caching

Cloud & Infra: AWS, EC2, Lambda, RDS, SQS, API Gateway, Cognito, S3, ECR, ECS, CloudFormation, CodePipeline, Docker, Envoy, Infrastructure-as-Code

DevTools & Testing: Git, Load Testing (Locust), Performance Testing, CI/CD Pipelines

Observability & Monitoring: Datadog, CloudWatch, Distributed Tracing, Metrics, Logging

ACHIEVEMENTS

- Extra Mile Award (Mar 2025) – exceptional technical and business impact
- Dashing Debut Award (Jul 2024) – outstanding innovation
- Partnership Pioneer Award (2022–23) – FinTech partnership leadership
