EXPERIENCE

Credit Saison India

Lead Software Engineer | Oct 2021 – Present | Bangalore, India

A leading NBFC and subsidiary of Credit Saison Co. Ltd., one of Japan’s largest credit/prepaid card issuers.

- Lead a team of 4 engineers, owning technical strategy, design reviews, and delivery across platform and lending services.
- LLM-Powered Loan Insights:** Integrated an LLM API (AWS Bedrock) to automatically summarize loan rejection reasons into clear, customer-friendly explanations, using prompt templating, structured JSON output, and token-cost controls.
- Zero-Trust Authentication:** Engineered an Envoy Proxy sidecar platform to offload JWT verification across 75+ microservices, standardizing Zero-Trust security org-wide and eliminating duplicated auth code while reducing per-request latency.
- Loan Orchestration Engine:** Built a high-performance workflow engine in Kotlin and coroutines processing 20K+ loans/day across complex sync/async state machines with idempotent retries; reduced end-to-end loan-approval p99 latency from 15s to 8s (~47%).
- Self-Healing Systems:** Designed an automated self-healing mechanism that detects and reprocesses failed loans via error-code monitoring, auto-resolving ~90% of failures and cutting cases needing manual intervention from 10% to 1% of applications.
- FinTech Partner Integrations:** Built and launched greenfield services enabling end-to-end loan approvals for major partners including CRED, BharatPe, Paytm, and Groww.
- Automated Verification Pipelines:** Streamlined KYC (UIDAI, NSDL), underwriting (bureau and income checks), and PennyDrop bank verification, accelerating the approval lifecycle by 15%.

Progression: Senior SE (Oct 2023–Mar 2025) • SE II (Oct 2022–Sep 2023) • SE I (Oct 2021–Sep 2022)

Lenskart

Software Engineer | Mar 2020 – Oct 2021 | Bangalore, India

- Real-Time WhatsApp Reporting:** Engineered an event-driven system using Apache Kafka and Gupshup APIs to deliver automated daily sales PDFs and real-time analytics to franchise partners.
- Financial Reconciliation (Cash Reco):** Built a centralized cash-reconciliation system tracking daily collections, integrating ICICI bank deposits with on-site agent collections.

SUMMARY

Backend specialist with 6.5+ years building scalable, low-latency distributed systems, with deep expertise in Java/Kotlin and AWS. Proven track record automating loan orchestration and partner-integration pipelines in FinTech. Experienced in leading teams and driving technical strategy, from centralizing auth via Envoy sidecars to improving processing success rates through automation.

EDUCATION

B.Tech, Information Technology
Cochin University of Science and Technology (CUSAT)

2015 – 2019

SKILLS

Languages

Java Kotlin Python SQL

Backend

Spring Boot Spring MVC
Hibernate Coroutines REST APIs

Data

PostgreSQL MySQL Redis
ElasticCache

Cloud & Infra

AWS EC2 Lambda RDS
SQS API Gateway Cognito
CloudFormation CodePipeline
Docker Envoy

Observability & Concepts

Datadog CloudWatch
System Design Microservices
Event-Driven DSA

ACHIEVEMENTS

- Extra Mile Award + Rewards (Mar 2025)
- Dashing Debut Award + Rewards (Jul 2024)
- Partnership Pioneer Award (2022–23)
